

Pharmacology Quick Reference

Medicine study tool — [content/ebooks/pharmacology](#)

Antidotes

Acetaminophen overdose

N-acetylcysteine

Benzodiazepine overdose

Flumazenil

Opioid overdose

Naloxone

Warfarin (life-threatening bleed)

4-factor PCC + vitamin K

Heparin

Protamine sulfate

Methanol / ethylene glycol

Fomepizole

Organophosphates

Atropine + pralidoxime

Iron

Deferoxamine

Digoxin

Digoxin immune Fab

Beta-blocker overdose

Glucagon

High-yield mechanisms

ACE inhibitors

Block ACE -> less angiotensin II, less bradykinin breakdown

Beta-lactams

Inhibit penicillin-binding proteins (cell wall synthesis)

Statins

Inhibit HMG-CoA reductase

Warfarin

Inhibits vitamin K epoxide reductase

Pharmacology Quick Reference

Medicine study tool — [content/ebooks/pharmacology](#)

Sulfonylureas

Stimulate insulin secretion (glucose-independent)
